**REBOUND®** is a TENS (Transcutaneous Electrical Nerve Stimulator) pain relief device that works "through the skin", emitting a "tingling sensation" to help you manage your pain without the use of drugs.

Scientific research suggests that TENS stimulation (electro-therapy) can be used to relieve chronic or acute pain by blocking the pain signals and triggering a release of endorphins.

**Simply surround your pain, power up and go!**

**No limit on how often or how long to use the REBOUND® device**

**Find pain relief in as little as 15 minutes**

**REBOUND Pain Relief Device®**

- Portable and Easy-to-Use
